

Care of freshly refinished parts -

The parts will continue to cure for about 7 days

If you choose to install before then, we will not be liable for any issues!

The parts are NOT powdercoated and will chip and scratch if you are not careful. Once you receive the parts, unwrap them and carefully lay them out in an open area to allow plenty of air so they may cure.

You may notice a slight color difference from one part to the next. All parts from a single job are refinished at the same basic time with the same materials. This is due to the condition and makeup of the underlying plastic and cannot be avoided. In most cases it is hardly noticeable.

Do not use any chemical cleaners on your newly finished parts.

When cleaning or wiping your interior down use 2 microfiber towels. One slightly damp with water and the other dry. Wipe the part with the damp towel and dry it off with the other towel.

If a part does chip or scratch it usually has to be sent back and the entire part will need to be refinished again. We will not cover or warranty any parts that chip or scratch due to mishandling.

Let the parts cure, take your time, don't force parts into place.

Thanks for choosing Stickynomore and pass the word!!
