Removal Instructions

Ferrari 360 Four Switch Trim Removal

You will not need any tools to remove the trim and switches

- Start by gently but forcefully pulling the switches out of the trim. You may use a small flat screwdriver if you cannot get a good grip on the switch and gently pry the top to pop it loose from the trim. Once you have pulled all the switches out, it should look like this.

Pic below

- At this point, it is a good idea to mark each connector so you know which one connects to which switch later. I mark them 1-4, left-right.

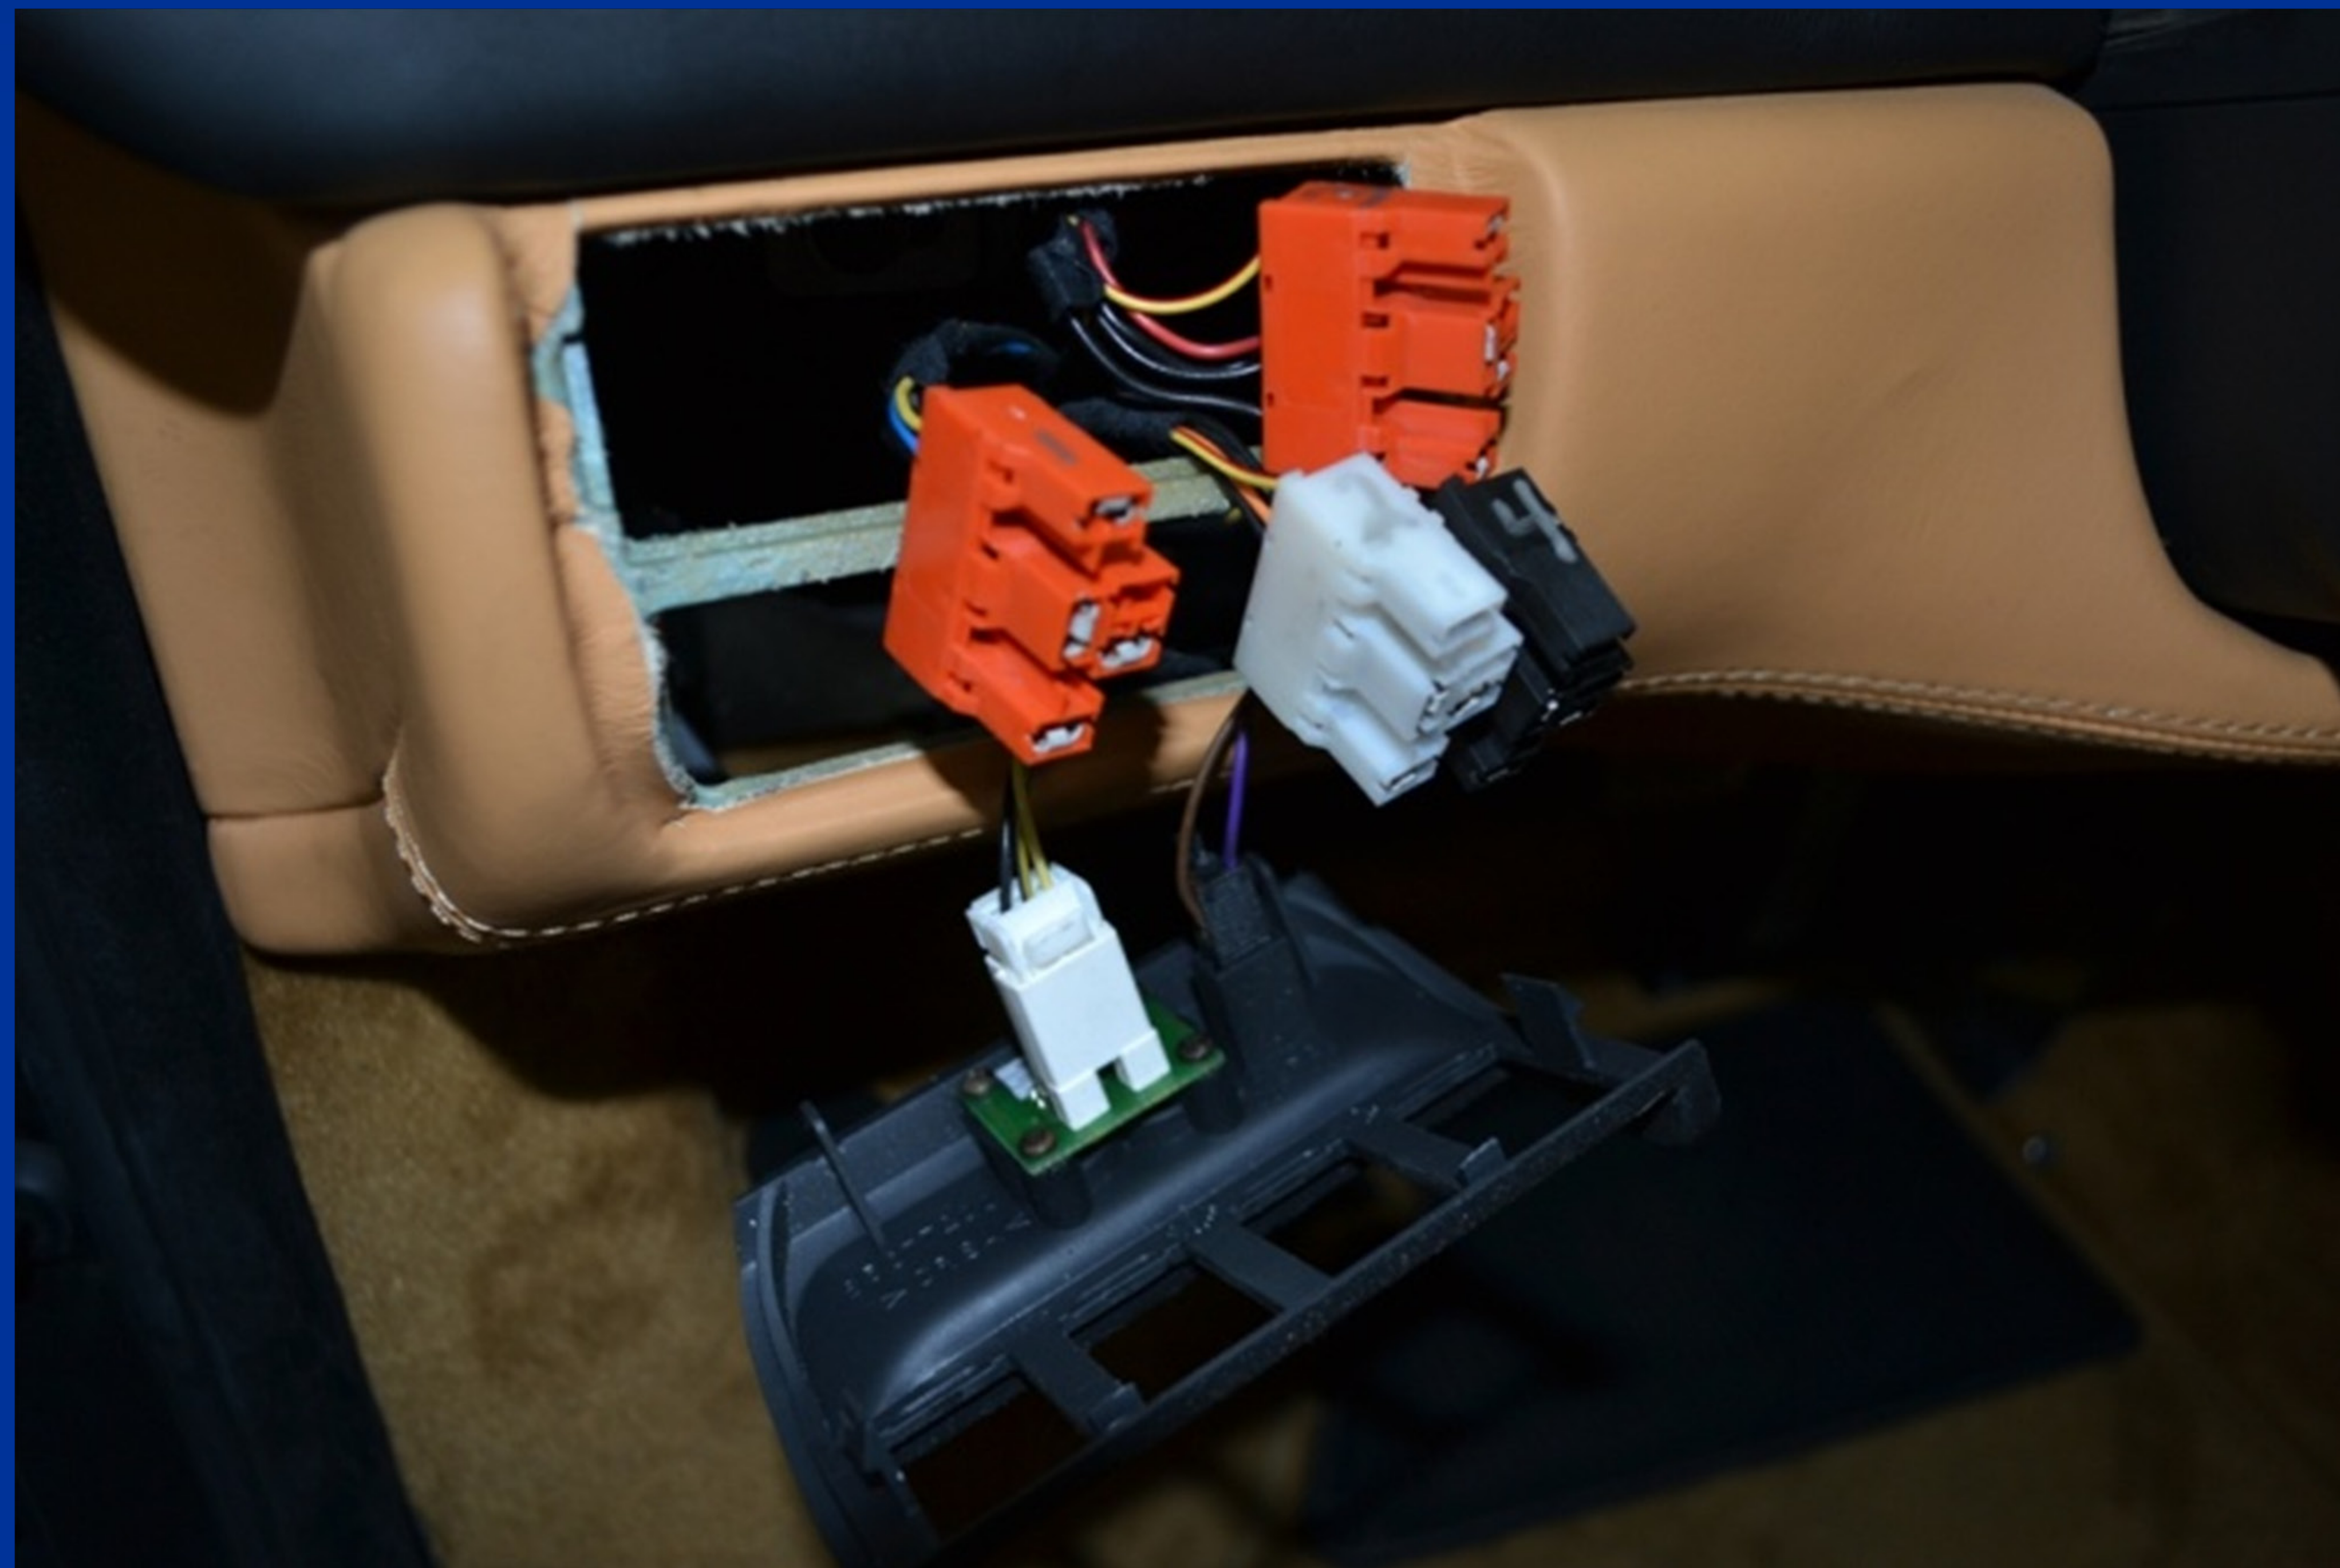

Pic below

■ Now pull each connector off of each switch and set the switches aside. If you look inside the trim you will see a small tab on both sides. This tab needs to be lightly pulled inward to release the trim from the dash. The pic below shows the tab I am referring to. There also may be two similar tabs at the inside top of trim. You can easily feel for them and release them.

- Push the switch connectors back thru there holes in the trim and gently pull the entire trim forward. The pic below shows what this should look like

- Unclip the white connector and the alarm light connector.
You are done. Reverse the order when re-installing.
If you have any questions please feel free to contact us. Thanks
