

S N M **StickyNoMore** **Removal Instructions**

Ferrari 488/Cali T HVAC Panel Disassembly

Tools needed:

Regular Phillips Screwdriver

Small Flat Head Screwdriver

- Remove the six screws from the rear of the panel

- Pop the two tabs on the backside with a flat screwdriver

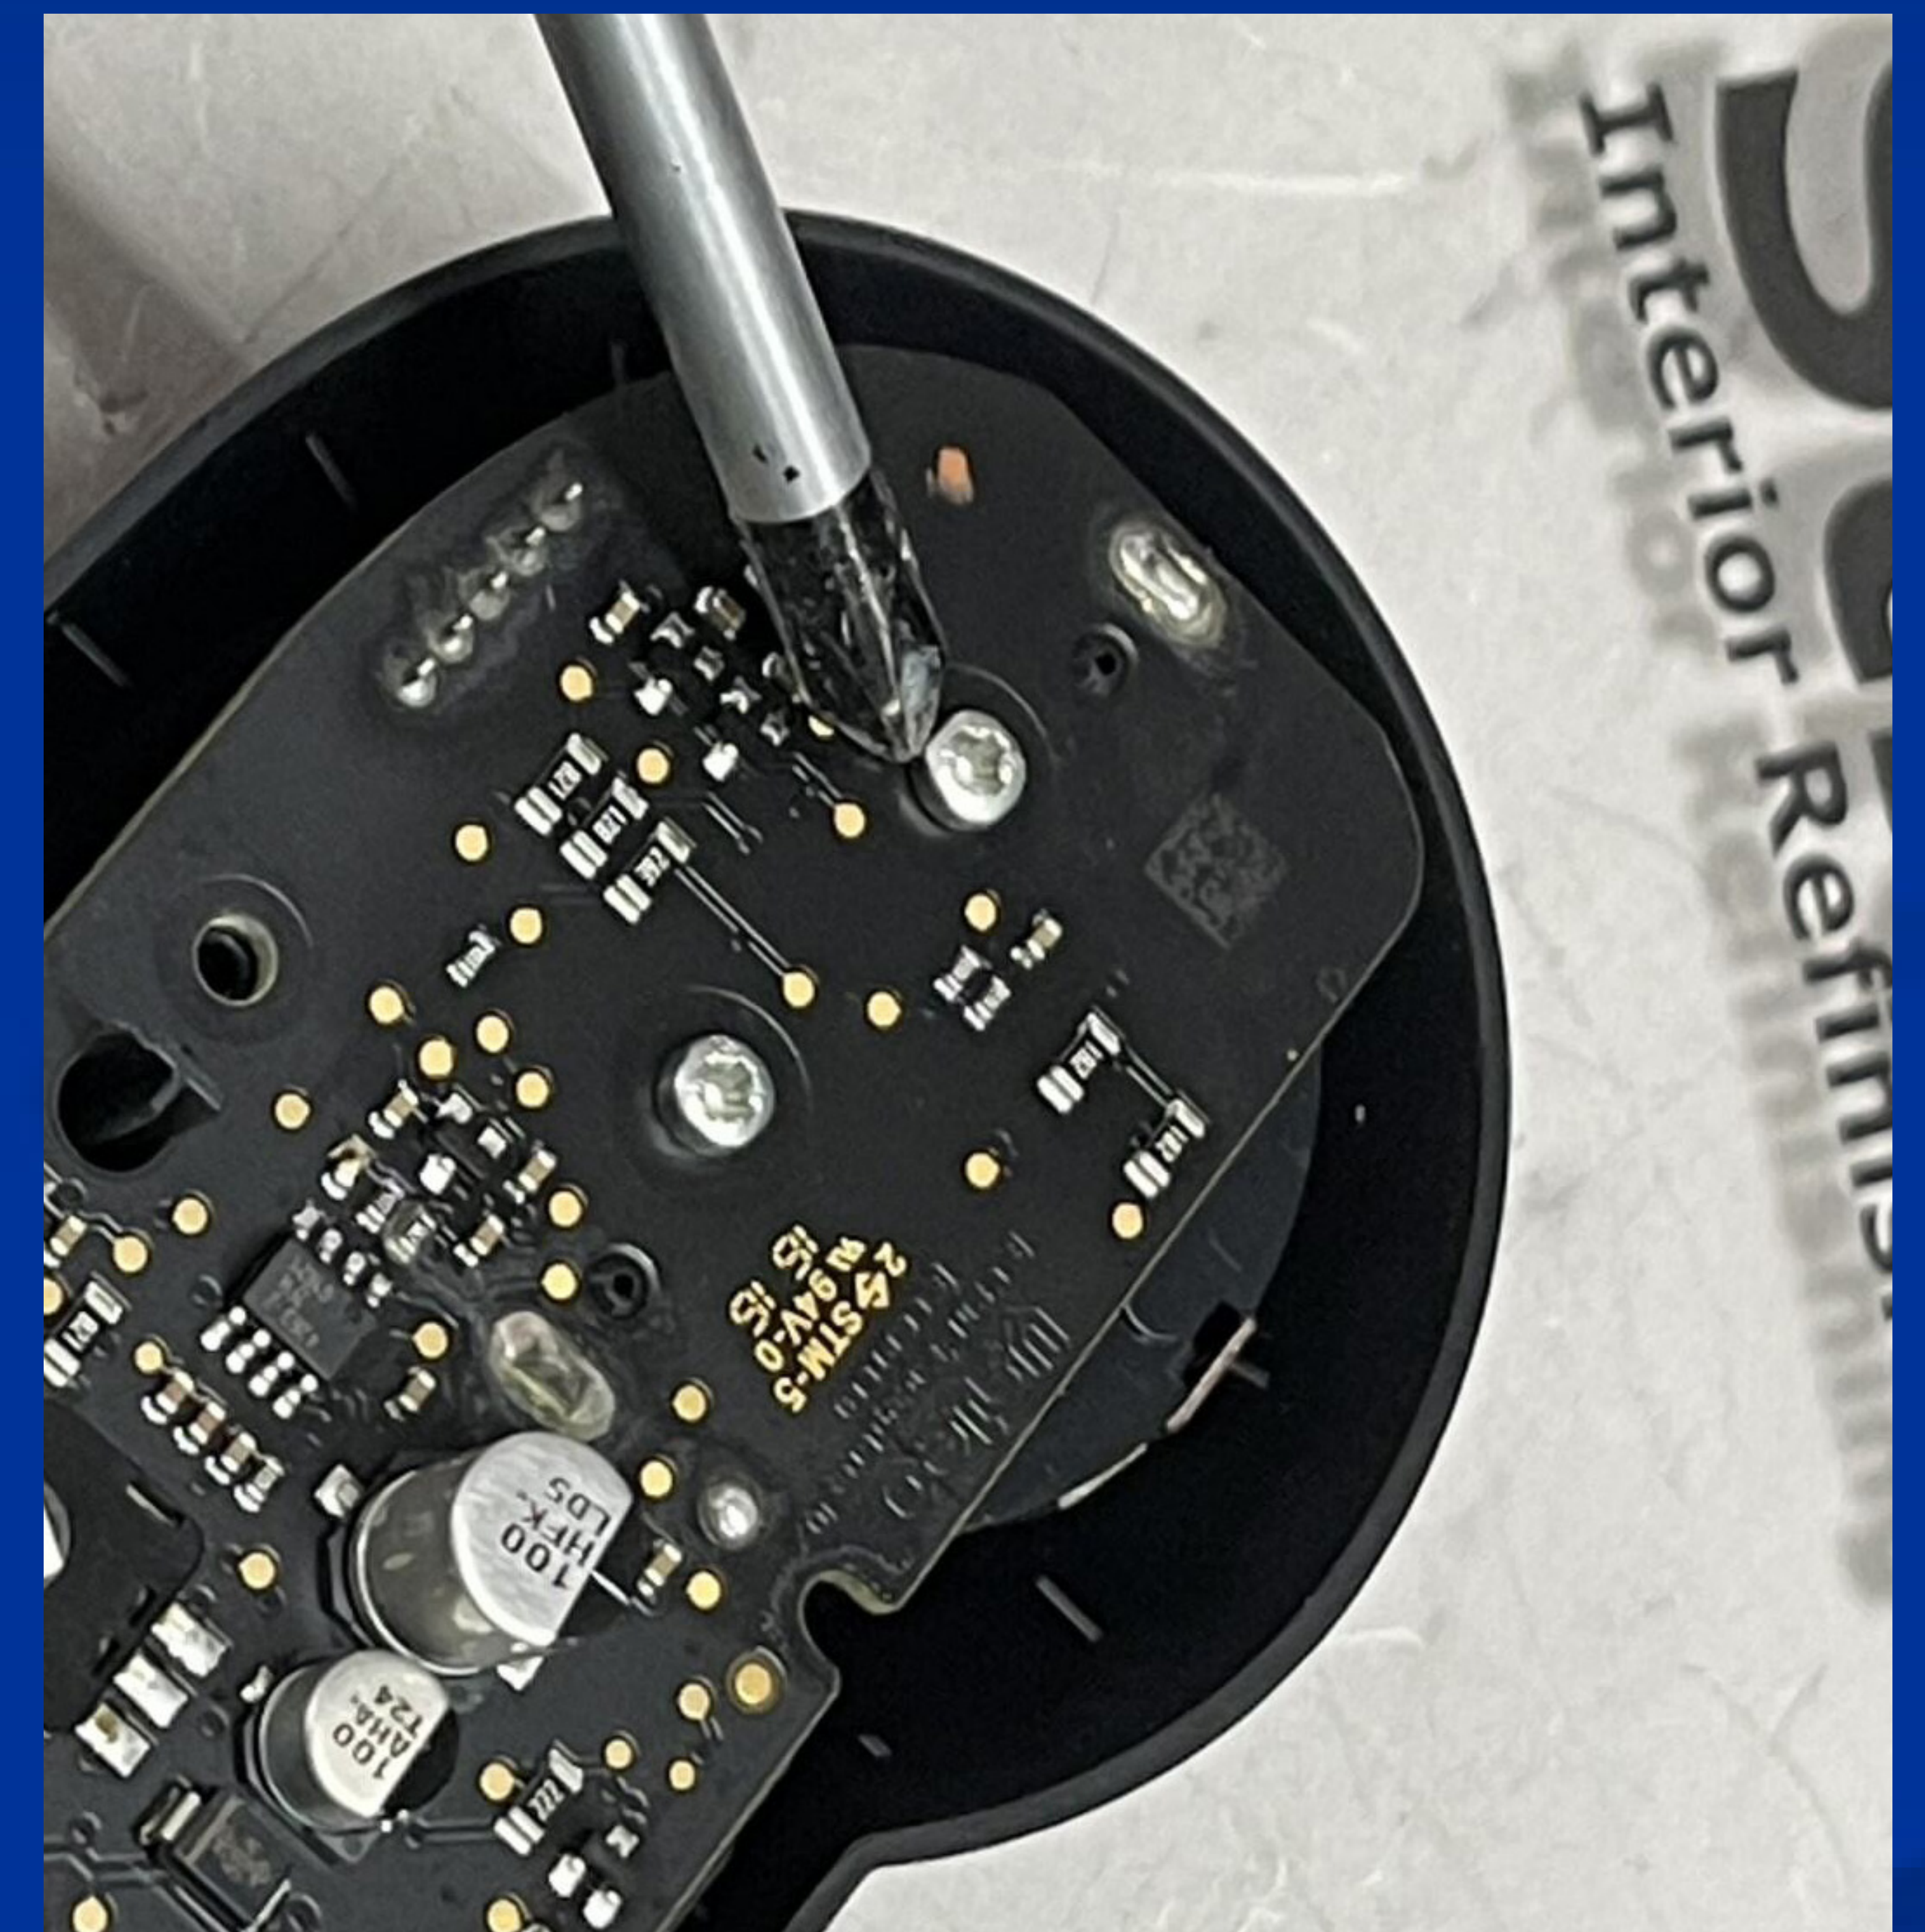

- Remove the back cover, revealing the electronics board

- Remove the four screws from the board

Mark and keep all screws separate, they only fit back to where you removed them from

■ Upon removal of the screws, the main two temp button sleeves will pop out

- GENTLY pry around the edge of the sleeve caps and pry them off

- At this point, you should be able to very carefully pull out the electronics board

- This is as far as you need to disassemble the panel

Good luck, be patient and if you have any questions please do not hesitate to call or email us. Thanks
